1. Introduction

What is Pink Diamond Coin (PDC)?

Pink Diamond Coin (PDC) is a decentralized, deflationary token built on the **Binance Smart Chain (BSC)**. PDC is designed with a primary focus on **stability, protection of holders, and long-term growth**. By implementing a **penalty system** for early sales, token burns, and a robust staking mechanism, PDC ensures a sustainable ecosystem for its investors.

Core Features:

- **High Penalty System:** 80% penalty for sales within the first 48 hours, and 50% within 30 days.
- **Deflationary Model:** 1% burn on every transaction.
- **Staking Options:** Earn up to 20% APY through various staking plans.
- **Strategic Liquidity Pools:** Initial liquidity set at **\$10 per PDC**, paired with USDT on BSC.
- **Whale Protection:** Limitations on large token holders to prevent market manipulation.

2. Market Overview and Vision

In the evolving world of decentralized finance (DeFi), one of the key challenges is token stability, particularly during the early stages of a project. Many projects fall victim to **pump-and-dump schemes** or **price manipulation** by whales.

PDC is designed to address these challenges by offering a token that incentivizes **holding** rather than selling. Through **high penalties for early sales**, combined with **periodic burns**, PDC creates an environment where **value increases over time** as more tokens are removed from circulation.

Our vision is to create a **long-term, stable token** that provides tangible value to its holders through staking, liquidity rewards, and a deflationary supply model.

3. Tokenomics

- **Token Name:** Pink Diamond Coin (PDC)
- **Token Symbol:** PDC
- **Total Supply:** 100,000,000 PDC
- **Initial Price:** \$10 per PDC
- **Initial Liquidity:** \$4000 (paired with USDT on Binance Smart Chain)

Breakdown of Token Allocation:

- **Staking Rewards:** 30%
- **Burn Mechanism:** 1% of each transaction is burned.
- **Team Allocation:** Held by the anonymous team to stabilize and protect the token price, with strict sell limitations.
- **Liquidity Reserve:** 20% allocated to ensure liquidity and future growth.

Sales Penalty Structure:

To prevent rapid sell-offs and price manipulation, PDC implements a **dynamic sales penalty system**:

- **80% penalty** on sales within the first **48 hours**.
- **50% penalty** on sales within the first **30 days**. This mechanism encourages long-term holding and reduces speculative trading.

Burn Mechanism:

With every transaction, **1% of the transaction amount** is permanently burned, reducing the total supply over time and creating deflationary pressure.

Whale Protection:

Large holders (those with 1 million or more PDC) are restricted to selling no more than **10%** of their holdings in a single transaction. This ensures that no single entity can dramatically affect the token price.

4. Security and Penalty Structure

To maintain the stability and integrity of PDC, the smart contract enforces a strict **sales penalty** structure. This system discourages short-term traders and rewards long-term investors:

- **80% penalty** for sales within **48 hours**: This high penalty ensures that speculative buyers looking to flip the token for quick profit will face substantial financial disincentives.
- **50% penalty** for sales within **30 days**: This further discourages short-term selling and promotes holding the token for a longer duration.

These penalties go directly into the liquidity pool, helping maintain the token's value and supporting long-term sustainability.

Additionally, the **whale protection** rule ensures that large holders cannot manipulate the market. By limiting sales from large wallets, the price of PDC remains stable even with significant holders.

5. Liquidity and Staking

Initial Liquidity:

The initial liquidity for PDC is set at **\$4000** paired with **USDT**, ensuring there is enough liquidity for early investors to trade without extreme price fluctuations. This liquidity is locked to guarantee that funds remain in place and that the token's market can grow in a sustainable way.

Staking Options:

PDC offers attractive staking rewards to encourage long-term investment in the token:

- **5% APY** for a **7-day** lock-in.
- **10% APY** for a **30-day** lock-in.

- **20% APY** for a **180-day** lock-in.

These staking options provide flexibility for investors who want to earn passive income through their PDC holdings.

6. Roadmap

Phase 1: Launch and Initial Liquidity

- Token launch with **\$10 per PDC** starting price.
- Liquidity pool paired with **USDT** on Binance Smart Chain.
- Community building and early investor rewards through staking.

Phase 2: Expansion and Partnerships

- Listings on major decentralized exchanges like **PancakeSwap**.
- Partnership with DeFi platforms for staking and yield farming.
- Initial token burns based on community milestones and growth.

Phase 3: Governance and Innovation

- Launch of a community governance model, allowing PDC holders to vote on key changes to the protocol.
 - Expansion of liquidity pools to include multiple trading pairs.
-

7. Team and Governance

Team:

The Pink Diamond Coin team consists of an experienced group of blockchain developers, economists, and crypto professionals. While the team remains anonymous, their collective expertise drives the project toward achieving sustainable, long-term success.

Governance:

As the project evolves, **community governance** will be introduced, allowing PDC holders to participate in important decisions regarding future updates, token burns, and liquidity expansions.

8. How to Buy PDC

1. Download and install **MetaMask** or **Trust Wallet**.
2. Add the **Binance Smart Chain (BSC)** network to your wallet.
3. Purchase **BNB** or **USDT** on a centralized exchange like Binance.
4. Transfer your **BNB** or **USDT** to your wallet.
5. Use **PancakeSwap** to swap BNB/USDT for **PDC**. Set the slippage tolerance to account for the transaction fees.
6. Confirm the transaction and receive **PDC** in your wallet.

9. Conclusion

Pink Diamond Coin (PDC) is uniquely positioned to offer a secure, sustainable token that prioritizes long-term growth and stability. Through its deflationary model, whale protection, and high penalties for early sales, PDC fosters an environment where investors are rewarded for their patience and commitment.

10. FAQ

1. What is the penalty for early selling?

PDC implements an **80% penalty** on sales within the first **48 hours** and a **50% penalty** within **30 days** to discourage short-term sales.

2. How does the burn mechanism work?

A **1% burn** is applied to every transaction, reducing the total circulating supply and increasing scarcity over time.

3. How can I earn with PDC?

You can stake your tokens for:

- **5% APY** for a **7-day** lock-in.
- **10% APY** for a **30-day** lock-in.
- **20% APY** for a **180-day** lock-in.

4. Where can I buy PDC?

PDC is available on **PancakeSwap** and other major decentralized exchanges.
